                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Souciet, J.L., Aigle, M., Artiguenave, F., Blandin, G., Bolotin-Fukuhara, M., Bon, E., Brottier, P., Casaregola, S., de-Montigny, J., Dujon, B., Durrens, P., Lepingle, A., Llorente, B., Malpertuy, A., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekaia, F., Toffano-Nioche, C., Wesolowski-Louvel, M., Wincker, P. and Weissenbach, J. Genomic exploration of the hemiascomycetous yeasts: 1. A set of yeast species for molecular evolution studies
FEBS Lett. 487 (1), 3-12 (2000)
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                          Submitted (07-SEP-2000) Genoscope - Centre National de Sequencage, 2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's p1 and EST libraries. A more detailed description of the library and how to order individual BAC clomes, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila melanogaster (fruit fly)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) this://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               62;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LYASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CAAATCATACAGATATTGTCAAAAAAAAAAAAAAGACTAATAATAACA 722
                                                                                                                                                                          /note="Wector: pBluescript SK plus; Site_1: EcoRI; Site_2: XhoI; The library was constructed by R Haywood. cDNAs were synthesized from ganetocyte poly(A)+ RNA by oligo d(T) priming, size-selected and directionally cloned into the EcoRi (5' end) to XhoI (3' end) sites of the Uni-ZAP XR lambda vector (Stratagene). The primary library was mass excised as phagemid using the ExAssist helper phage (Stratagene). Clones were mass excised using the ExAssist helper phage (Stratagene), the phagemids were precitptated with PEG 8000 and extracted with phenol/chloroform. Phagemid DNA was electroporated into DHIOB cells. Clone Availability: David Sibley, Washington University."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. .436

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

/note="Vector: pHOS1; Site 1: Bst I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (-2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotgun sequencing projects. In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

```

The invention relates to yeast promoters that are used to control the expression of homologous and heterologous sucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as ethanol or both. Therefore expression of nucleic acid molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters

New promoter sequences from Saccharomyces cerevisiae useful for controlling expression of homologous and heterologous nucleic ac expression in yeast cells.

acid

Saccharomyces cerevisiae useful for smologous and heterologous nucleic

The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as glucose or a non-fermentable carbon molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters are useful for, inter alia, the high level production of proteins or polypeptides in yeast cell culture. The present sequence is pYMR251AP plasmid related to the invention: This plasmid contains pPRB1 and yeast

The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as glucose or a non-fermentable carbon molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Saccharomyces cerevisiae. Unidentified.

                                                                                                                                                                                 The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as glucose or a non-fermentable carbon molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters are useful for, inter alia, the high level production of proteins or polypeptides in yeast cell culture. The present DNA sequence is saccharomyces cerevisiae YMR251WA promoter region related to the

CC This invention describes a novel nucleic acid representing a synthetic companies. The Bax gene of the invention is useful for identifying Bax-cc resistant yeast or fungi, identifying, or obtaining and identifying CC Candida spp. sequences that are differentially expressed in a pathway community leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death or identifying inhibitors or commention have cytostatic, fungicide; immunosuppressive, virucide and compositions, compositions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chang H,

CC polypeptides (SPTM) and polymucleotides are useful in the diagnosis, and control study, prevention or treatment of diseases associated with decreased cc expression of functional SPTM, e.g. actinic keratosis, arteriosclerosis, ctribosis, hepatitis, polycythaemia vera, primary ctromoscytopenia, anaemia, psoriasis, cancers including adenocarcinoma, cleukaemia, myeloma or sarcoma, immune syent disorder such as acquired immunodeficiency syndrome (ADIS), allergies, asthma, Crohn's disease, cd diabetes mellitus, glomerulonephritis, Goodpasture's syndrome, gout, cc diabetes mellitus, hepatitis, multiple sclerosis, osteoporosis, cantratisis, neurological disorders such as epilepsy, stroke, Alzheimer's cd disease, pick's disease, Huntington's disease, dementia, parkinson's disease, pick's disease, Huntington's disease, dementia, parkinson's cd disease, other developmental disorder of the central nervous system, cmental disorder including mood, amxiety or schizophrenic disorder, camnesia or Tourette's disorder. The polynucleotides may be used in chybridisation and amplification technologies, e.g. in assessing gene cexpression patterns, to develop a transcript image for a particular cell cor tissue, or to create transgenic animals to model human disease. This sequence encodes a human secretory protein isolated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated polynucleotide a naturally occurring polynucleotide sequence at least 90 % identical to it, a polynucleotide complementary to it or an RNA equivalent of it. The purified secretory polypeptides (SPTM) and polynucleotides are useful in the diagnosis,

                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                     The invention relates to polynucleotide and polypeptide sequences CC associated with cancer, particularly colon cancer. Also disclosed are (i) CC an expression vector comprising the polynucleotide, (ii) a host cell CC transformed or transfected with the expression vector, (iii) an isolated antibody, or its antigen-binding fragment, which specifically binds to CC the polypeptide, (iv) a method of detecting or determining the presence CC of cancer in a patient, (v) a fusion protein comprising at least one of CC the polypeptides, (vi) an oligonucleotide that hybridises to the polypeptide sequence under highly stringent conditions, and (vii) a CC method of stimulating and/or expanding T cells specific for a tumour CC protein. The polypeptide specifically comprises the amino acid sequence CC of C34S, C637S, C637S, C640S, C636S or one of the potential open reading CC frames (ORFS) of C636S. These polypeptides are encoded by the CC polynucleotide sequences, where both are capable of eliciting a humoral CC and/or cellular immune response. The polynucleotides, polypeptides, and CC antibodies are useful for diagnosing, preventing or treating cancer. CC particularly colon cancer. The polynucleotide and polypeptide sequences are also useful in DNA strand invasion, antisense inhibition, mutational CC analysis, nucleic acid purification, isolation of transcriptionally cative genes, blocking or transcription factor binding, genome cleavage, CC or in situ hybridisation, and as enhancer colon cancer associated CC cDNA. Note: The sequence represents a human colon cancer associated CC construction the USPTO web site at sequents.

                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of novel DNA-binding CC proteins (AAUJ8154-AAUJ8281), and cDNA and genomic sequences encoding for these proteins. DNA-binding proteins such as histones, chromatin CC organisation modifier) domain proteins, and Y-box binding proteins may CC contribute to diseases resulting from aberrant DNA organisation and/or gene transcription. The sequences of the invention are useful in CC screening assays to identify antagonists and/or agonists that may enhance CC or block activities mediated by DNA-binding proteins. Blockers of DNA-binding proteins may be useful in treating disorders such as malignant CC diseases (e.g. cancer), autoimmune disorders (e.g. diabetes mellitus), rheumatic diseases (e.g. rheumatoid arthritis), genetic abnormalities CC (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological CC disorders (e.g. Alzheimer's disease). The polymucleotide sequences of the CC invention may also be used in gene therapy. AAS29158-AAS29239 represent CC sequence data for this patent did not form part of the printed CC septence data for this patent did not form part of the printed CC septence of the main of the printed of the printed contents of the printed conte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunication (e.g. autoimmune disorders (rheumatoid arthritis, multiple selerosis, diabetes mellitus), allergic reactions and conditions (e.g. asthma), inflammatory conditions, graft-versus-host disease, blood-related disorders (thrombosis, atherosclerosis), hyperproliferative disorders (e.g. cancer), renal disorders (e.g. acute glomerulonephritis), cardiovascular disorders (e.g. arrhythma), respiratory disorders (e.g. cardiovascular disorders), neurological disorders (e.g. Alzheimer's (Goodpasture's syntonome), neurological disorders (e.g. Alzheimer's cdisease, Parkinson's disease), endocrine disorders (e.g. Alzheimer's cdisease, reproductive system disorders (e.g. endometriosis), infectious disease, reproductive system disorders (e.g. endometriosis), infectious cdiseases (e.g. viral, bacterial or fungal infections) and gasterointestinal disorders (e.g. Crohn's disease). The invention is also useful to stimulate neuronal growth and treat, prevent, and/or diagnose neuronal damage which occurs in certain neuronal disorders or neuro-degenerative conditions. The present nucleic acid sequence represents a chuman DNA-binding protein ganomic DNA sequence of the invention. Note:

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO or the patent did rectly from USPTO or the patent did rectly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format directly from USPTO or the patent did rectronic format di
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                               Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; antionvulsant; antibacterial; antifungal; antiparastic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.

       The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis and limb regenerative tissue repair, and ulcers; stimulates angiogenesis and limb regenerative incurrant disorders or neurodegenerative conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or
                                                                                                                                                                                                                 Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer.
                                                                                                                                                                                         Claim 1; SEQ

                                                                                                                                                                                                                                                                                                                                                                                                CC keratinocyte growth; prevents hair loss, since PGF family members
CC activate hair-forming cells and promotes melanocyte growth; stimulates
CC growth and differentiation of hematopoietic cells and bone marrow cells
CC when used in combination with other cytokines; maintains organs before
CC induces tissue of mesodermal origin to differentiate in early embryos;
CC increases or decreases the differentiation or proliferation of embryonic
CC stem cells, besides, haematopoietic lineage; modulates mammalian
CC characteristics, such as, body height, weight, hair colour, eye colour,
CC skin, percentage of adipose tissue, pigmentation, size, and shape (e.g.,
CC cosmetic surgery); modulates mammalian metabolism; changes mammal s metal
CC depression, tendency for violence, tolerance for pain, reproductive
CC capabilities, hormonal or endocrine levels, appetite, libido, memory, or
CC stress; increases or decreases storage capabilities, fat content, lipid,
CC omponents. This sequence encodes a novel human musculoskeletal system
CC printed specification, but was obtained in electronic format directly
